Km

This map shows a Zone of Theoretical Visibility (ZTV) from the marked LANDMAP landscape area. It was calculated using multiple observer points, each set at 1.5m in height above DTM (a bare earth model), each with a maximum view extent of 35km.

On site, it is probable that no one observer point would see the entire ZTV. In reality, the view is likely to be reduced by vertical objects such as trees, hedges and buildings, whose presence may change over time, such as when a forestry plantation is clear-felled or a new building is erected.
